**Availability Update for Sodium Phosphates Injection, USP,
Potassium Phosphates Injection, USP, Sodium Acetate Injection, USP, and
Potassium Acetate Injection, USP**

Dear Customer,

Pfizer Hospital is committed to providing timely supply information so that you can plan for patient care. As such, we want to notify you that we are now anticipating limited supply situations for **Potassium Phosphates Injection, USP**, **Sodium Acetate Injection, USP** and **Potassium Acetate Injection, USP** presentations due to a production delay arising from the processing of a third-party supplied component, coupled with increased demand arising from market shortages. In addition, **Sodium Phosphates Injection, USP** remains in limited supply and we are revising our previously communicated recovery estimate.

We are actively working to address these delays and return to healthy inventory levels. While intermittent deliveries are expected, we are currently estimating full recovery between November 2021 and February 2022, depending on the product. To help ensure equitable distribution of remaining inventory and reduce the potential for stockouts, we have placed product on allocation and/or are metering inventory releases to wholesalers and via direct shipment on a weekly basis.

Details on impacted products can be found in the table below, current as of the date of this letter. Please recognize that this is a dynamic situation and these estimates may change, so we encourage you to check our [Availability Report](#), updated daily and accessible on the [PfizerHospitalUS.com](#) homepage, for the latest information on product status. We will continue to provide timely updates as necessary.
