

December 15, 2020

Dear Valued Customer,

We are writing to inform you that due to third-party manufacturing issues, Baxter is experiencing a supply constraint on our INFUVITE codes. As a result, Baxter will be placing INFUVITE on protective allocation effective December 15, 2020. Please see Table A for allocation limits:

INFUVITE bulk packages are nationally stocked out and are not available at this time. The above group allocation limits for INFUVITE have been calculated based on purchase history from May through November 2020. We understand the clinical importance of this product, and recommend INFUVITE single dose packages as alternatives to the bulk packages during the duration of the allocation. For planning purposes, a case of our bulk INFUVITE codes (2A9019 and 2A9061) and single dose INFUVITE codes (2A9018 and 2A9008) contain the same number of doses.

We recognize the importance of supply continuity and the impact this allocation may have on your ability to care for your patients. We are doing all we can to work with our third-party supplier to resolve the shortage as quickly as possible and are committed to transparently and proactively communicating any changes in supply with you.
