**Subject: Important Information About Caps for ExactaMix EM2400 Valve Sets – New Blue Color**

Dear Valued Customer,

As Baxter works to increase the supply of EM2400 valve sets, we want to make you aware that you may receive EM 2400 valve sets with blue caps. The different color does not affect product function. Baxter has secured an alternative plastic resin to address the earlier supply constraint on the original resin. The alternative plastic resin yields caps with a blue color.

It is important to note that the medical device correction set forth in Baxter’s valve set leak field action, FA-2022-024, applies to all valve sets—including those sets with blue caps. Therefore, EM2400 valve sets with blue caps should still be used on compounders operating under a 20-port configuration, as outlined in the Field Action.

Pictured below is the EM2400 valve set with the current off-white caps (left), and new blue caps (right).

Valve sets with both colors of valve caps will be distributed moving forward. However, valve set lots will not contain both cap types in the same lot. You may receive a lot with blue caps one week and a lot with off-white caps another week.

If you have questions, please reach out to your Baxter Nutrition Specialist or Marketing representative.
