RE: Temporary Supply Interruption of Nutrilipid® 20%

Dear Valued B. Braun Customer,

As part of B. Braun's commitment to maintain transparent communication towards our customers, we would like to inform you that B. Braun Medical Inc. is anticipating a temporary supply interruption of **Nutrilipid® 20%** due to recent unexpected high demand. All Nutrilipid codes were placed on 100% protective allocation in response to the spike in demand, but overcoming the surge in demand was not possible.

Please refer to the affected product descriptions below:

Product Code	Product Description	Case Quantity	NDC
S4600	Nutrilipid® 20% 1000 mL Flexible Container	8	00264-4460-00
S4601	Nutrilipid® 20% 500 mL Flexible Container	12	00264-4460-10
S4603	Nutrilipid® 20% 250 mL Flexible Container	12	00264-4460-30

A limited supply of S4600 and S4601 will be available in October, but we do not anticipate a full recovery of all Nutrilipid product codes until the end of Q4 2021. Customers will be notified if this projected time frame changes. Even though our distribution partners may still have product in their pipeline, B. Braun will not be able to provide additional product until the next releases are available.

The drug shortage link on the American Society of Health-System Pharmacists (ASHP) website can be used to get updated information on all lipid injectable emulsions (ILEs): <https://www.ashp.org/drug-shortages/current-shortages/drug-shortage-detail.aspx?id=750&loginreturnUrl=SSOCheckOnly>. Sourcing additional ILEs from alternative suppliers could be challenging during this time.

We apologize for any inconvenience and are working diligently to ensure this issue is resolved as quickly as possible. For more information or questions, please contact your local sales representative.

Sincerely,

Allison Thompson, RD, LDN
Product Manager, Clinical Nutrition
